## NEWS RELEASE

Vancouver, BC August 11, 2003 TSX Trading Symbol: ENG

---

EnerGulf Resources Inc. ("EnerGulf") is pleased to announce Equity Engineering Ltd. Of Vancouver, British Columbia has been contracted to perform the summer exploration program on the FH Claims. Stewart Harris, PGeo is the project geologist and the qualified person under NI 43-101. A crew has been mobilized into the property for an expected three week program of detailed geological mapping and prospecting, chip sampling, hand trenching and infill geochemical soil sampling. The FH Claims are a bulk tonnage target for copper-gold mineralization and/or copper-gold vein mineralization. In the early 1990's Hemlo Gold Mines Inc. held an option on the area covered by the FH Claims and conducted reconnaissance soil and rock sampling. Hemlo's work defined coincident geochemical gold and copper anomalies with a surface expression of approximately 1100 metres by up to 500 metres contoured with Gold (Au) greater than 100 ppb and Copper (Cu) greater than 200 ppm. Other narrow lenticular anomalies were also located. Pending positive results from this years program the Company anticipates a drilling program will be warranted.

Further to the Company's News Release of April 23, 2003 regarding participation in up to a 12.5% interest in the Welder E&P #1 TLG well, to be drilled in Goliad County, Texas, the project has been delayed by the operator due to unrelated business activities. EnerGulf anticipates the project will be moving ahead in the fall and will report developments as they occur. EnerGulf's interest would be held through its wholly owned subsidiary, EnerGulf Corporation based in Houston, Texas and the project would be operated by Welder Exploration and Production of San Antonio, Texas.

EnerGulf continues to actively review and investigate additional oil and gas prospects in Canada, the USA and various overseas locations. Any developments will be reported if and when they occur.
